PROFESSIONAL SUMMARY

B.Tech in AI & Data Science with hands-on experience building end-to-end analytics pipelines, including a self-scraped, automated data pipeline and ML/NLP-based projects. Skilled in SQL, Python, and Power BI, turning messy real-world data into actionable insights. Seeking an entry-level Data Analyst or related roles.

TECHNICAL SKILLS

- Databases & Languages: SQL, Python
- Data Analysis & BI Tools: Excel, Power BI, Pandas, NumPy, Matplotlib, Seaborn, Plotly
- Tools & Frameworks: MySQL, Git, GitHub, Jupyter Notebook, VS Code, Streamlit, Scikit-learn, Selenium
- Soft Skills: Problem Solving, Analytical Thinking, Communication, Team Collaboration, Leadership

PROJECTS

Job Market Tracker: Automated ETL Pipeline & BI Dashboard (Python, Selenium, PostgreSQL, Power BI)

- Automated daily scraping of listings across 6 job categories from Naukri, feeding a refreshable 5-page Power BI dashboard that surfaces in-demand skills, top hiring companies, fresher-friendly roles, and high-paying roles
- Built the pipeline end-to-end, scraped via Selenium, deduped and normalized listings with Pandas, loaded into PostgreSQL (Supabase) while overcoming real anti-bot/IP-blocking issues, and backed the dashboard with 10 SQL queries using CTEs and window functions

E-Commerce Sales Analysis (SQL, MySQL, Python, Pandas, Matplotlib, Seaborn)

- Uncovered that the top 10 categories drove 79.78% of revenue and identified a 2.3% customer retention rate, findings directly usable for inventory prioritization and retention strategy
- Analyzed 100K+ orders through 15 SQL queries against a MySQL database, tracking 20% YoY sales growth (2017–2018) and visualizing trends with Matplotlib and Seaborn

Sales Data Analysis (Python, Pandas, Matplotlib, Scikit-Learn):

- Analyzed 185,950 sales transactions to answer 10 core business questions, peak sales periods, top revenue cities, and frequently co-purchased products, directly usable for inventory and marketing decisions
- Built a linear regression model forecasting sales 3 months out, engineering time and location features from raw transaction data

Retail Sales & Performance Dashboard (Power BI):

- Built a 6-page dashboard tracking \$1.76M in sales and \$1.05M in profit, giving stakeholders visibility into YoY, MoM, and return-rate trends
- Designed a snowflake schema with DAX measures (CALCULATE, TOTALYTD, SAMEPERIODLASTYEAR) to support time-intelligence reporting

EDUCATION

B.Tech in Artificial Intelligence & Data Science | 2022–2026

Shri Balaji Institute of Technology and Management, Betul | RGPV University | **CGPA: 7.68**

Senior Secondary (XII, Science - Mathematics) | 2022

Vidya Bhumi Public School, Betul | MP Board | **93.00%**

Secondary (X) | 2020

Sarvodaya Higher Secondary School, Betul | MP Board | **91.00%**

COURSES & CERTIFICATIONS

SQL (Apna College) • Python (Udemy) • Power BI (WsCube Tech) • Data Science (Code With Harry) • Git & GitHub (Apna College)
